Title of Book : Simulations And The Future Of Learning

Discussion : READING

RESUME

WHAT A SIMULATION TEACHES

We did not set out to teach awareness of body language. That was not our original intent within our scope of leadhership. People leave with experiance highly focused on information they neverregistered before.

Although we phused the boundaries, the animation system was an evaluation of a system that had been used in computer games. With the dialogue system we were going deeper into the unknown. And for the first time, we realized we might have gone too far.

The main roles

- Turning the head of the bot toward whoever wa speaking.
- Moving the lips according to what the bot was saying.
- Blinking and breathing.
- Controlling the facial animation.
- Controlling the board body animation.

Leadership activities

- Leaders are essential to an organization, and the world.
- Leadership is inward resolve and motivation.
- Leaders add humor to a workplace, and get everyone revved up.
- They speak with authority and convivtion and listen well.

Conclusions

So , I think the solution is more people can understand the program well and is easy for people to capture what is described. As well as providing support facilities whith good simulation.

interest law is not of desire but rather from a feeling. Your life can be wonderful if you positive thinking about everthing around you. What do you feel will change what will happen in the future. we should be grateful for what we have and always think positive to doing everything.

If you can are focus your mind , you will be able to enjoy your life more than what you imagine.
Means that determines success or failure is from yourself . Imagination is everything , and it is an attraction in the future. we should not be a waste of time at all because it would be very valuable.all the secrets that exist in nature we can feel ourselves and we can also control it during our minds associated with feelings.
